

Hydrokrat Pump Recommendation Report

Pump Model: Etaline

Application: HVAC

Required Flow: 70 m³/hr

Required Head: 60 m

Pump Type: Inline Pump

Features:

- HVAC circulation
- Energy efficient
- Commercial buildings

Recommended Pump: Etaline Application: HVAC (Heating, Ventilation, and Air Conditioning) Flow Range: Up to 700 m³/h (70 m³/h within range) Head Range: Up to 96 m (60 m within range) Features: - Single-stage volute casing pump in in-line design - IEC-compatible power drive system with PumpDrive 2 or PumpDrive 3 and KSB SuPremE® motor - Uncooled mechanical seal to EN 12756 and replaceable casing wear rings - ATEX-compliant version available - Temperature range -30 to +140 °C - Discharge pressure up to 16 bar Why Recommended: Etaline is designed specifically for HVAC applications including cooling circuits and air-conditioning. It supports the required flow and head (70 m³/h and 60 m) comfortably within its operating range. The pump's high efficiency, integrated frequency inverter options, and robust mechanical seal ensure reliable, energy-efficient operation in HVAC systems. Its temperature and pressure ratings suit typical HVAC conditions, making it an ideal choice.
