

Hydrokrat Pump Recommendation Report

Pump Model: moviBOOST VPT

Application: Pressure Boosting

Required Flow: 70 m³/hr

Required Head: 60 m

Pump Type: Hydropneumatic System

Features:

- High efficiency
- Industrial use
- BMS compatible

Recommended Pump: moviBOOST VPT Application: Pressure boosting in residential and commercial buildings, hospitals, hotels, and industrial water supply systems. Flow Range: Up to 660 m³/h (suitable for 70 m³/h) Head Range: Up to 160 m (suitable for 60 m) Features: - Fully automatic, user-friendly hydropneumatic system - High efficiency exceeding European MEI requirements - Integrated controller with BMS compatibility (Modbus, Profibus, Lonbus, Bacnet) - Siemens switchgear and VFD for reliable and energy-efficient operation - Factory-built, compact system with 2 to 6 vertical high-pressure pumps Why Recommended: The moviBOOST VPT series is designed specifically for pressure boosting applications with flow and head ranges that comfortably cover 70 m³/h and 60 m head. Its advanced energy-efficient design, automatic control, and compatibility with building management systems make it ideal for maintaining stable pressure in various building services. The system's modularity and reliability ensure consistent performance and ease of integration in commercial and residential water supply networks.
